SUMMARY

Information Technology student at Rwanda Polytechnic with hands-on experience developing backend systems, REST APIs, authentication, and database-driven applications. Experienced with Node.js and Express.js, MongoDB, SQL databases, and JWT authentication, while currently developing skills in Django and PostgreSQL. Built real-world applications including a real-time chat backend and an agricultural market price tracking system. Seeking a Backend Developer Internship to contribute to practical software projects while strengthening backend engineering skills.

EDUCATION

Rwanda Polytechnic (RP), Kigali

Diploma in Information Technology — Year 2, Current

PROJECTS

eHAHIRO — Agricultural Market Price Tracker | REST APIs | Supabase | JavaScript

- Developed backend functionality for an agricultural market price tracking platform.
- Created API functionality for managing agricultural market and crop-price data.
- Worked with Supabase for database storage and application data management.
- Designed the system around improving access to agricultural market information.

AI Crop Disease Detector — In Progress | Python | Machine Learning

- Developing an image-classification application for detecting crop diseases.
- Working with Python-based machine learning techniques for agricultural image analysis.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, PHP, SQL

Backend Development: Node.js, Express.js, Django (currently learning)

APIs & Authentication: REST APIs, CRUD Operations

Databases: PostgreSQL, MySQL

Database Engineering: Relational Database Design, SQL Queries, Database Management

Tools & Platforms: Git, GitHub, Linux, Supabase

CERTIFICATIONS

Digital Talent Program (DTP) — Software Development Track; Rwanda ICT Chamber / IHS Towers; Beginner — | Intermediate — | Advanced |
